AESHA GUPTA

Profile

Dynamic and motivated BCA (Cloud Computing) student at Kaushalya The Skill University (2022–2025), with hands-on experience in Python, Java, MySQL, PostgreSQL, and foundational knowledge of AWS, cybersecurity, cloud engineering, and machine learning. Proficient in developing real-world projects such as AI voice assistants, stock market analysis tools, and recommendation systems using Python libraries like Matplotlib, Seaborn, and ML techniques like TF-IDF and cosine similarity.

Experienced in ethical hacking, with practical exposure to platforms like OWASP Juice Shop and DVWA, and in identifying and analyzing OWASP Top 10 vulnerabilities. Conducted source code reviews (white-box testing) and black-box testing as part of secure coding practices. Skilled in network traffic analysis using Wireshark for threat detection.

Successfully contributed to industry-level solutions, including the CV Aligner project for Cygnet.One, where I applied secure coding aligned with mission quality standards. My interest in compliance (GDPR, ISO 27001) and secure development practices grew through self-learning and case studies during these projects. Passionate about implementing cloud-secure architectures, data analysis, and innovative tech solutions that adhere to recognized compliance standards.

A/10, Ila Society, sales India, Ahmedabad, Gujrat

Expertise

- Python (Matplotlib, Seaborn)
- Machine Learning
- Java
- MySQL
- Data Analysis
- Git & GitHub Commands
- Prompt Engineering
- Cloud Computing (AWS)
- Operating System (Linux, Windows, ubuntu)
- Compliance & Security Best Practices
- Data Privacy & Regulatory Awareness (e.g., GDPR, ISO standards)
- Cybersecurity (OWASP, DVWA, Vulnerability Testing)

Certifications

- **AWS Certified –** Cloud Computing (Foundational)
- **AWS Certified –** Data Center Technician
- **CISCO –** Introduction to Cybersecurity
- **CISCO –** Networking Basics
- **Cisco -** Python Essential 1
- **Fortinet –** Technical Introduction to Cybersecurity
- **TATA Strive Extension Center & Microsoft –** CyberShiksha+ (15-week Cybersecurity Program)

Project

Stock Market Analysis. Python Project

- This project aims to analyze historical stock market data using Python to Identify trends predict future price movements, and develop trading strategies.

AI voice assistant JARVIS, SDLC Project

- Jarvis is an advance AI assistant designed to help you manage your time efficiently. It provides a dynamic, adaptive timetable that responds to your changing schedule.

Recommendation system, ML project

- Movie Recommendation System Based on Genre: Developed a ML powered movie recommendation system using content-based filtering. It identifies similar movie based on user input by analyzing genre similarity(e.g., Action, Comedy, Horror, etc.) with techniques like TF-IDF and cosine similarity for effective movie suggestions.

Education

BCA of Cloud Computing

Kaushalya the skill University

2022-2025

Language

English
Hindi
Gujarati

Cybersecurity Projects

- OWASP Juice Shop & DVWA: Exploited vulnerabilities in these web applications to practice common web attacks like SQL, Injection, XSS, and CRSF
- Compliance & Security Practices: Gained hands-on experience in understanding data protection standards and compliance requirements such as GDPR and ISO 27001 while working on cybersecurity projects. Applied secure coding practices, performed vulnerability assessments, and aligned project work with industry compliance frameworks to ensure data privacy and regulatory adherence.

Internship Projects

Data Analytics AI/ML GenAI Business Dev Support : Developed CV Aligner, an AI-powered platform for CYGNET.ONE that automated CV formatting and organization, converting unstructured resume data into structured formats using machine learning techniques. This enhanced efficiency in resume handling by over 60% and improved data accuracy.

Cygnet Product Delivery:
Created over 20+ custom data converters using Cygnet's DCU Tool to transform diverse client data formats into structured Cygnet-compatible outputs.
Handled large-scale data mapping, transformation logic, and validation to ensure accuracy and compliance.
Streamlined client onboarding and reduced manual intervention through automated and reusable conversion flows.
Played a key role in multiple client implementations by ensuring data quality and format integrity.

TOOLS

- **Cybersecurity:** Burp Suite, DirBuster, Nmap, Wireshark, Metasploit, OWASP Juice Shop, DVWA, source code review (black-box & white-box testing)
- **Compliance:** Knowledge of GDPR, ISO 27001; experience with compliance tools (risk registers, audit trackers, policy management tools)
- **ML / Python:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook
- **SDLC:** Spiral Model, Java (front-end & back-end development), XML (UI layout), MySQL (database management)
- **Web Development:** React.js, Figma (UI design), Node.js, Express.js, MongoDB, Python (Flask), pdfplumber, python-docx
- **Authentication & Security:** JWT (JSON Web Token), Bcrypt
- **DevOps / Cloud:** Docker, Nginx, AWS, Heroku
- **Client Product Delivery:** DCU (Data Converter Utility), Excel
- **Project Management:** SharePoint (project tracking, documentation, collaboration)
